

1. **Introduction**
 The purpose of this study is to investigate the effects of the proposed system on the performance of the system. The study is divided into two main parts: a theoretical analysis and an experimental analysis. The theoretical analysis is based on the principles of the system, while the experimental analysis is based on the results of the experiments.

2. **Theoretical Analysis**
 The theoretical analysis is based on the principles of the system. It is divided into two main parts: a theoretical analysis of the system and a theoretical analysis of the system. The theoretical analysis of the system is based on the principles of the system, while the theoretical analysis of the system is based on the results of the experiments.

3. **Experimental Analysis**
 The experimental analysis is based on the results of the experiments. It is divided into two main parts: an experimental analysis of the system and an experimental analysis of the system. The experimental analysis of the system is based on the principles of the system, while the experimental analysis of the system is based on the results of the experiments.

4. **Conclusion**
 The conclusion of the study is that the proposed system has a significant effect on the performance of the system. The study is divided into two main parts: a theoretical analysis and an experimental analysis. The theoretical analysis is based on the principles of the system, while the experimental analysis is based on the results of the experiments.
